Amendments to the Claims

4. Please amend claims 8-15 as follows:
5. Claim 8 (currently amended): A ~~machine accessible~~ storage medium containing instructions that, when executed, cause a machine to:
 - determine that a firmware image for server management operational code in a baseboard management controller (BMC) in a recipient system needs to be replaced;
 - send a message over a network, wherein the message requests a compatible replacement firmware image;
 - negotiate with a donor system based on a received acknowledgement that the donor system has a compatible image, using a predetermined policy to select the donor system from a set of at least one donor system having a compatible image, wherein at least one donor system of the set of at least one donor system sends an acknowledgement

Art Unit: 2454

to the recipient system in response to the sent message, wherein negotiating with a donor system further comprises instructions to:

receive an acknowledgement from the donor system in response to the message request sent over the network, where an acknowledgement is sent by each donor system having a compatible image;

when more than one acknowledgement is received by the recipient system, select a donor system from the set of at least one donor system sending an acknowledgement, based on the predetermined policy, and when only one acknowledgement is received, select the one donor system sending the acknowledgement; and

receive a compatible image for server management from the selected donor system;

upload the compatible image sent by the donor system to the recipient system; and

update the recipient system server management firmware with the uploaded compatible image.

6. Claim 9 (currently amended): The ~~machine-accessible~~ storage medium as recited in claim 8, wherein the network is selected from a group consisting of a wired and unwired network.

7. Claim 10 (currently amended): The ~~machine-accessible~~ storage medium as recited in claim 8, wherein the message is sent via an out-of-band (OOB) connection.

8. Claim 11 (currently amended): The ~~machine-accessible~~ storage medium as recited in claim 10, wherein a baseboard management controller residing on the recipient system is capable of communicating to donor systems via at least one communication means, wherein the communication means is selected from a group consisting of a local area network (LAN), a wireless access point, a wired inter-chassis management bus (ICMB), and a Bluetooth® protocol wireless network.

9. Claim 12 (currently amended): The ~~machine-accessible~~ storage medium as recited in claim 8, wherein the donor system comprises a management console.

10. Claim 13 (currently amended): The ~~machine-accessible~~ storage medium as recited in claim 8, wherein the donor system comprises a peer server in the network.

11. Claim 14 (currently amended): A ~~machine-accessible~~ storage medium containing instructions that, when executed, cause a machine to:

receive a message over a network, by a donor system, the message sent by a recipient system requesting an updated server management firmware image, wherein the message is sent to at least one donor system on the network;

determine by the donor system whether a compatible image to the requested updated firmware image is available to fulfill the request;

when the donor system has a compatible image, negotiate with the recipient system, the recipient system to use a predetermined policy to select the donor system

Art Unit: 2454

from at least one donor system having a compatible image, wherein negotiating further comprises instructions to send an acknowledgement and offer to the recipient system when the donor system has a compatible server management image; and

when the donor system is selected from the at least one donor system having a compatible image, by the recipient system, upload the compatible server management image to the recipient system.

12. Claim 15 (currently amended): The ~~machine-accessible~~ storage medium as recited in claim 14, wherein negotiating comprises instructions that cause the machine to: receive an acceptance acknowledgement for the offer.
